

The *agent-native* operating system for UGC creator management.

Built for agents. **Not bolted on.**

Every UGC management tool is a nightmare for *both* parties.

Managers spend half their week on busywork. Creators get left without support between calls. Both sides churn.

THE MANAGER'S WEEK

Eight tabs open — Sheets, Slack, Notion, Gmail, Granola, Calendly, Stripe, Linear

Chasing creators for content; chasing brands for approvals

Manually reconciling payouts

Remembering whose dog is named Bagel

Drafting the same five outreach DMs every Monday

THE CREATOR'S EXPERIENCE

A check-in call every four weeks, if they're lucky

A brief, then weeks of silence

Vague feedback, weeks late

No clear sense of what "good" looks like

Waiting on payment with zero visibility

Incumbents — Grin, CreatorIQ, Whalar — are databases with a chatbot bolted on. The human still does all the work.

Three curves crossed *at once*.

01 · CAPABILITY

Agents got good

LLM agents crossed from demo to dependable — tool use, persistent memory, and multi-step autonomy are production-grade in 2026. The labour can finally be automated, not just summarised.

02 · DEMAND

UGC went mainstream

200M+ creators worldwide, 45M+ professional. Influencer marketing hit ~\$33B in 2026, compounding ~25% a year. Every brand now runs a creator program — and needs to operate one.

03 · INCUMBENCY

The tools predate AI

Grin, CreatorIQ and Modash were architected as CRMs before agents existed. You can't retrofit an agent-native data model onto a form-shaped database. The category is up for grabs.

The window to build the agent-native system of record is open now.

We built SortCreators for agents *from line one*.

You can't retrofit this. A data model shaped for agents beats a chatbot stapled to a form — every table is typed, addressable, and queryable by the fleet.

BET 01

The whole system is queryable

Provenance on every fact. A typed tool for every workflow. Every interaction, transcript and action item is addressable by any agent — over MCP.

BET 02

Agents work 24/7, not on demand

Sage orchestrates a fleet on a cadence. Campaigns optimise overnight; creators get chased without the manager ever touching an inbox.

BET 03

Approval as a primitive

Every write parks in an approval queue with full audit. Agents propose, humans one-click confirm. Trust scales because nothing happens behind your back.

Managers stop being inbox janitors — back to 1:1s, real relationships, and creative calls.

The entire operation runs on an autonomous agent fleet.

Outreach, briefing, roster strategy, trend-watching, wellbeing — every step of UGC management is handled by autonomous agents working in parallel, on a cadence. Add creators, not headcount; the fleet scales with the roster.

⊕ **Orchestration**

ALWAYS ON

Routes every read and write across the typed-tool surface.
Persistent memory. Owns what surfaces in the daily brief.

◇ **Meeting briefs**

PER MEETING

Generates a 1:1 brief the moment a meeting lands —
performance, timeline, personal context, agenda.

↻ **Creator outreach**

DAILY

Drafts outreach DMs in each creator's preferred channel —
the dog by name, the overdue brief. Cadenced, never
spammy.

○ **Roster strategy**

EVERY 6H + WEEKLY

Portfolio reviews and weekly ROI-per-creator reports.
Surfaces cut-candidates and proposes tier changes.

▷ **Trend scouting**

CONTINUOUS

Watches every video across the roster and competitors —
emerging hooks, on-screen text, trending audio from your
best performers.

△ **Wellbeing watch**

IN BUILD

Tracks tone across every meeting and DM. Flags creators
trending negative before they churn.

One foundation. Every agent runs autonomously on the same primitives — typed tools, approval-gated writes, persistent memory, full audit —
and is exposed over MCP to any external agent stack.

Monday, 9am. Sage has already done the week's busywork.

Maya — meeting in 47m. Mneme brief ready. Trending **+22%**, 1.4M views. Mentioned her sister's wedding is June 12. 4d overdue · brand-fit doc

Tom — 12 days dark. Echo drafted a check-in DM in Telegram: *"Saw the kitchen reset hit 300k — congrats. Quick one: how's the move to Lisbon going?"*

Hermes spotted a trend — 3 of your top-10 over-index on the "kitchen reset" hook. Audio variant up **340%** on TikTok this week. Two competitors started running it Friday.

Overnight — Echo sent 15 chases, 9 replies queued. 3 approvals waiting

Atlas — 6-hour roster review: 4 promotions, 2 demotions, 1 cut-candidate. Weekly ROI report shipped to your inbox. One click each to confirm.

The manager has 4 decisions to make today. Sage handled the other 47.

Manager web, shipped. Creator iOS, *next*.

Every CRM-first incumbent treats the creator as a row. We treat them as a person — 24/7 coaching and full visibility into their own data.

● SHIPPED · LIVE IN PRODUCTION

Manager web

sortcreators.com

Daily briefing — overdue items, going-cold creators, momentum movers, tone flags, birthdays

Relationship Health 0–100 per creator — touch · response · delivery · tone

Action items auto-extracted from every meeting transcript

Sage chat over the typed-tool surface + MCP server for any external agent

Usage-rights tracker, brand-safety scan, transparent CPM + bonus payouts

○ IN BUILD · SHIPPING Q3 2026

Creator iOS app

8-screen onboarding · Sign in with Apple

24/7 AI coach — "Why is engagement dropping?" "What hook lands harder here?"

Per-video teardown — hook strength, retention curve, comment sentiment, next iteration

Live brief + payout status — what's owed, when, why

Content suggestions from what their audience actually converts on

Direct line to their manager and the agents

Treat creators as people, not rows. Two-sided platform → two-sided retention.

The only agent-native operator in the category.

Incumbents can bolt on a chatbot. They can't re-pour the foundation.

A \$33B market growing 25% a year — run by software that predates agents.

BEACHHEAD · IN-HOUSE
UGC TEAMS~85k orgs at our price point.
Bottoms-up, winnable first.

200M+ creators worldwide, 45M+ professional. Every brand now runs UGC — and someone has to operate it.

Incumbents priced for the era when the *manager* operated the tool. We priced for when the *agents* do.

Sources: Influencer Marketing Hub / Statista (influencer-marketing spend, ~\$32.5B 2025 → ~25% CAGR); Fortune Business Insights, Grand View Research (platform-software market). SOM is bottoms-up.

SaaS margins — because the agents are the operator.

PRO

\$99 / mo

Solo managers & small agencies · 5–50 creators

Full agent fleet

Daily briefings + chat

Transparent payouts

STUDIO

\$399 / mo

Growing agencies · 50–250 creators

Everything in Pro

Multi-seat RBAC

Higher rate limits + API

ENTERPRISE

Custom

Brand teams & networks · 250+ creators

White-label + SSO

Custom integrations

A2A marketplace

Land and expand. Start on Pro, grow into Studio as the roster scales. The creator app drives bottoms-up word-of-mouth between managers — a built-in acquisition loop the incumbents don't have.

Structurally cheaper to run. ~\$70/mo infra per org today. Because the fleet does the operating, we serve the SMB and mid-market that \$2,500/mo incumbents (Tagger) can't reach — at software gross margins.

Built and shipped — solo, in 10 weeks.
